---

## PROJECTS

### Hackathon Project, Florida International University: Shell Hacks

Miami, FL

Small Details Mobile App

Sep. 2022

- Collaborated on a team of four as a front-end developer, using Flutter and Dart, to create a mobile app designed to connect small mobile businesses with their customers.
- Successfully completed the app within the 36-hour time-limit and demonstrated it to Fortune 500 companies sponsors.
- Utilized Flutter Widgets: visual elements that were configured through arguments in the code, to integrate visual and interactable features.
- Used the Bash terminal and Git to send and receive code from the repository.

### Hackaday Project, University of Central Florida: Knight Hacks

Orlando, FL

UCF Parking Pal

Feb. 2023

- Collaborated on a team of three using HTML, CSS, JavaScript, and Google's Map API to create a functioning prototype WebApp in under 8 hours.
- Utilized HTML, CSS, and JavaScript to receive user input and displayed output with custom search functions through Google's Map API.

---

## TECHNICAL SKILLS
